DISCLOSURES

Pzena Investment Management, LLC ("PIM") is a U.S.-registered investment adviser with the United States Securities and Exchange Commission. PIM follows a deep value investment approach.

All investments involve risk, including loss of principal. Investments may be in a variety of currencies and therefore changes in rates of exchange between currencies may cause the value of investments to decrease or increase. The price of equity securities may rise or fall because of economic or political changes or changes in a company's financial condition, sometimes rapidly or unpredictably. Investments in foreign securities involve political, economic and currency risks, greater volatility and differences in accounting methods. These risks are greater for investments in Emerging Markets. Investments in small-cap or mid-cap companies involve additional risks such as limited liquidity and greater volatility than larger companies. PIM's strategies emphasize a "value" style of investing, which targets undervalued companies with characteristics for improved valuations. This style of investing is subject to the risk that the valuations never improve or that returns on "value" securities may not move in tandem with the returns on other styles of investing or the stock market in general.

Past performance is no guarantee of future results, and the past performance of any account or commingled fund managed by PIM should not be considered indicative of the future performance of any account or commingled fund managed by PIM. Investment return and principal value of an investment will fluctuate over time, may go down as well as up, and you may not receive upon redemption the full amount of your original investment. The performance information provided is historical in nature. The views and statements contained herein are those of Pzena Investment Management, LLC and are based on internal research.

Gross rates of return are presented gross of investment management fees and net of the deduction of transaction costs. An investor's actual return will be reduced by investment management fees. Net Returns are derived using a model fee applied monthly to Gross returns. Pzena uses the highest tier fee schedule, excluding performance fees, to illustrate the impact of fees on performance returns. As product fees change, the current highest tier schedule will be in effect.

Composite returns are benchmarked to the MSCI World ex USA Small Cap Index and the MSCI World ex USA Small Cap Value Index (the "Index"). The benchmarks are used for comparative purposes only. The MSCI World ex USA Small Cap Index captures small cap representation across 22 of 23 Developed Market countries (excluding the United States). The index covers approximately 14% of the free float-adjusted market capitalization in each country. The MSCI World ex USA Small Cap Value Index captures small cap securities exhibiting overall value style characteristics across 22 of 23 Developed Markets countries (excluding the United States). The value investment style characteristics for index construction are defined using three variables: book value to price, 12-month forward earnings to price and dividend yield. The Indices cannot be invested in directly. The performance of the Indices reflects the reinvestment of dividends net of withholding tax rates. The Pzena International Small Cap Focused Value strategy is significantly more concentrated in its holdings and has different sector and regional weights than the Indices. Accordingly, the performance of the Composite will be different from, and at times more volatile, than that of the Indices.
